INDEX TO SUBJECTS.

A

Absorption:
Spectra, ultra-violet, of certain physiological fluids (REINHARD) 1

Acetate:
Buffer mixtures, effect on protoplasm, as influencing rate of penetration of cresyl blue into vacuole of *Nitella* (IRWIN) 111

Acetic acid:
Calcium chloride, antagonism between, in developing *Fundulus* embryos (ARMSTRONG) 515
Potassium chloride, antagonism between, in developing *Fundulus* embryos (ARMSTRONG) 515
Protoplasm, effect on, as influencing rate of penetration of cresyl blue into vacuole of *Nitella* (IRWIN) 111
Sodium chloride, antagonism between, in developing *Fundulus* embryos (ARMSTRONG) 515

Acid:
Penetration into living tissues (TAYLOR) 207

Age:
Metabolism of liver tissue from rats of different ages (HAWKINS) 645

Aluminum chloride:
Gelatin, combination with (NORTHROP and KUNITZ) 481

Amœba:
dubia, antagonism of cations in action on protoplasm (REZNIKOFF) 221
—, reduction potentials, by micro injection of indicators (COHEN, CHAMBERS, and REZNIKOFF) 585

Arthropods:
Geotropic orientation in. I (CROZIER and STIER) 803

B

Bacillus:
coli, reduction of methylene blue (EADIE) 459

Bacteriophage:
Titration, and particulate hypothesis (CLARK) 71

Bacterium:
Luminous, oxygen consumption (HARVEY) 469

Blood:
Cell and inert particles in gelatin sols and gels, electrophoretic migration, with reference to leucocyte emigration through the capillary wall (ABRAMSON) 743
Dog, vapor pressure at body temperature (GROLLMAN) 495

Body:
Temperature, vapor pressure of dog's blood (GROLLMAN) 495

Buffer:
Acetate mixtures, effect on protoplasm, as influencing rate

Buffer—*continued*:
of penetration of cresyl blue into vacuole of *Nitella* (IRWIN) 111

C

Calcium:
Ion in living protoplasm (POLLACK) 539
Calcium chloride:
Acetic acid, antagonism between, in developing *Fundulus* embryos (ARMSTRONG) 515
Gelatin, combination with (NORTHROP and KUNITZ) 481
Capillary:
Wall, leucocyte emigration through, electrophoretic migration of inert particles and blood cells in gelatin sols and gels with reference to (ABRAMSON) 743
Casein:
Rennin effect on. II (PERTZOFF) 239
Catalase:
Liver, decomposition of hydrogen peroxide by (WILLIAMS) 309
Cation:
Antagonism, in actions on protoplasm of *Amœba dubia* (REZNIKOFF) 221
Cell:
Blood, and inert particles in gelatin sols and gels, electrophoretic migration, with reference to leucocyte emigration through the capillary wall (ABRAMSON) 743
Oxidation-reduction, intracellular. I (COHEN, CHAMBERS, and REZNIKOFF) 585
Cell—*continued*:
Physiology, micrurgical studies. V (REZNIKOFF) 221
—, — —. VI (POLLACK) 539
Swelling, kinetics (NORTHROP) 43
Cladocerans:
Rate of killing at higher temperatures (BROWN and CROZIER) 25
Collodion:
Membrane, dried, variations of transfer numbers with, produced by electric current (MICHAELIS and WEECH) 147
—, permeability of thin dry (NORTHROP) 233
Consumption:
Oxygen, of luminous bacteria (HARVEY) 469
Cupric chloride:
Gelatin, combination with (NORTHROP and KUNITZ) 481
Cytoplasm:
Viscosity, influence on phagocytosis of a particle (PONDER) 757

D

Dialysis:
Stirring, dialysis with (KUNITZ and SIMMS) 641
Dixippus:
morosus, phototropism (YAGI) 297
Drug:
Action in galvanotropic responses (FRIES) 507

E

Electricity:
Bioelectrical phenomena (OSTERHOUT) 83

Electricity—*continued*:
Protoplasmic asymmetry in *Nitella*, by bioelectric measurements (OSTERHOUT and HARRIS) 391
Variations of transfer numbers with dried collodion membrane produced by electric current (MICHAELIS and WEECH) 147
Electrolyte:
-free gelatin, preparation (NORTHROP and KUNITZ) 477
Electrophoresis:
Inert particles and blood cells in gelatin sols and gels, electrophoretic migration, with reference to leucocyte emigration through the capillary wall (ABRAMSON) 743
Embryo:
Chicken. XIII (COHN) 369
Fundulus, antagonism between acetic acid and calcium chloride in developing (ARMSTRONG) 515
—, — — acetic acid and potassium chloride in developing (ARMSTRONG) 515
—, — — acetic acid and sodium chloride in developing (ARMSTRONG) 515
Enzyme:
Substrate and, reaction between (BERKSON and FLEXNER) 433

F

Fluid:
Ultra-violet absorption spectra of certain physiological fluids (REINHARD) 1
Frog:
Nerve, respiratory quotient during stimulation (FENN) 175
Frog—*continued*:
Skin, concentration potentials across, influence of pH (AMBERSON and KLEIN) 823
Fundulus:
Embryo, antagonism between acetic acid and calcium chloride in developing (ARMSTRONG) 515
—, — — acetic acid and potassium chloride in developing (ARMSTRONG) 515
—, — — acetic acid and sodium chloride in developing (ARMSTRONG) 515

G

Galvanotropism:
Drug action in galvanotropic responses (FRIES) 507
Excitation, measurement (CROZIER and STIER) 283
Gelatin:
Combination with organic bases (PETRUNKIN and PETRUNKIN) 101
$CuCl_2$, $MgCl_2$, $CaCl_2$, $AlCl_3$, $LaCl_3$, KCl, $AgNO_3$, and Na_2SO_4, combination with (NORTHROP and KUNITZ) 481
Electrolyte-free, preparation (NORTHROP and KUNITZ) 477
Ionic activity (SIMMS) 613
Sols and gels, electrophoretic migration of inert particles and blood cells in, with reference to leucocyte emigration through the capillary wall (ABRAMSON) 743

Geotropism:
Orientation in arthropods. I (CROZIER and STIER) 803
— of young mammals (CROZIER and PINCUS) 789
— — — mice (CROZIER and OXNARD) 141
Reaction, geotropic, of rodless mice in darkness (KEELER) 361
—, —, — rodless mice in light (KEELER) 361
Gills:
Oyster, effect of temperature on mechanical activity (GALTSOFF) 415
Gonionemus:
Pulsation frequency in, temperature characteristics for (WOLF) 547
Growth:
Equation for growth processes (BROWN) 37
Prenatal, of mouse (MACDOWELL, ALLEN, and MACDOWELL) 57
Sporangiophores of *Phycomyces*, temperature characteristics (CASTLE) 407
Yeast, limiting of growth by changing environment (RICHARDS) 525
—, multiplication by constant environment (RICHARDS) 525

H

Heart:
Whole, temperature characteristic for contraction rate (COHN) 369
Hemolysis:
Saponin and sodium taurocholate, reference to Ryvosh series (YEAGER) 779
Hydrogen:
Ion, influence on concentration potentials across skin of frog (AMBERSON and KLEIN) 823
Peroxide, decomposition by liver catalase (WILLIAMS) 309
Hydrolysis:
Phosphate ion and, by pancreatic lipase (DAWSON and PLATT) 357

I

Illumination:
Visual acuity and, relation between (HECHT) 255
Inflammation:
Mechanism of process. III (ABRAMSON) 743
Injury:
Current, positive and negative, relation to protoplasmic structure (OSTERHOUT and HARRIS) 673
Ion:
Calcium, in living protoplasm (POLLACK) 539
Gelatin, ionic activity (SIMMS) 613
Hydrogen, influence on concentration potentials across skin of frog (AMBERSON and KLEIN) 823
Phosphate, and hydrolysis by pancreatic lipase (DAWSON and PLATT) 357
Proteins, nature of ionizable groups in (SIMMS) 629

K

Kinetics:
Cell and tissue swelling (NORTHROP) 43

L

Lanthanum chloride:
Gelatin, combination with (NORTHROP and KUNITZ) 481

Larva:
Malacosoma, geotropic orientation in (CROZIER and STIER) 803
Leucocyte:
Emigration through capillary wall, electrophoretic migration of inert particles and blood cells in gelatin sols and gels with reference to (ABRAMSON) 743
Light:
Bacteria, luminous, oxygen consumption (HARVEY) 469
Geotropic reaction of rodless mice in (KEELER) 361
Point-sources, two, photic orientation by (MITCHELL and CROZIER) 563
Lipase:
Pancreatic, phosphate ion and hydrolysis by (DAWSON and PLATT) 357
Liquid:
Osmosis, general considerations (SCHREINEMAKERS) 701
Liver:
Catalase, decomposition of hydrogen peroxide by (WILLIAMS) 309
Tissue, metabolism, from rats of different ages (HAWKINS) 645

M

Magnesium chloride:
Gelatin, combination with (NORTHROP and KUNITZ) 481
Malacosoma:
Larva, geotropic orientation in (CROZIER and STIER) 803
Mammal:
Geotropic orientation of young (CROZIER and PINCUS) 789
Mammal—*continued*:
Respiratory movements in young, temperature characteristics for frequency (STIER and PINCUS) 349
Membrane:
Collodion, dried, variations of transfer numbers with, produced by electric current (MICHAELIS and WEECH) 147
—, permeability of thin dry (NORTHROP) 233
Permeability. IV (MICHAELIS and WEECH) 147
Metabolism:
Liver tissue, from rats of different ages (HAWKINS) 645
Methylene blue:
Reduction by *Bacillus coli* (EADIE) 459
Micrurgy:
Cell physiology. V (REZNIKOFF) 221
— —. VI (POLLACK) 539

N

Nerve:
Frog, respiratory quotient during stimulation (FENN) 175
Steel wire-nitric acid model, effect of polarization on activity (BISHOP) 159
Nitella:
Counteraction of inhibiting effects of various substances on (IRWIN) 123
Protoplasmic asymmetry in, by bioelectric measurements (OSTERHOUT and HARRIS) 391
Vacuole, rate of penetration of cresyl blue into, effect of

Nitella—*continued*:
acetate buffer mixtures on protoplasm as influencing (IRWIN) 111
—, — — — of cresyl blue into, effect of acetic acid on protoplasm as influencing (IRWIN) 111
—, — — — of cresyl blue into, effect of sodium acetate on protoplasm as influencing (IRWIN) 111
Nitric acid:
Polarization, effect on steel wire-nitric acid model of nerve activity (BISHOP) 159

O

Ontogeny:
Physiology. A. XIII (COHN) 369
Organic bases:
Gelatin combination with (PETRUNKIN and PETRUNKIN) 101
Orientation:
Excitation, in compound fields, photic adaptation in phototropism (WOLF and CROZIER) 7
Geotropic, in arthropods. I (CROZIER and STIER) 803
—, of young mammals (CROZIER and PINCUS) 789
—, — — mice (CROZIER and OXNARD) 141
Photic, by two point-sources of light (MITCHELL and CROZIER) 563
Osmosis:
Liquid, general considerations (SCHREINEMAKERS) 701
Ostrea:
virginica Gm., effect of temperature on mechanical activity (GALTSOFF) 415
Oxidation:
-reduction, intracellular. I (COHEN, CHAMBERS, and REZNIKOFF) 585
Oxygen:
Consumption of luminous bacteria (HARVEY) 469
Oyster:
Gills, effect of temperature on mechanical activity (GALTSOFF) 415

P

Pancreas:
Lipase, pancreatic, phosphate ion and hydrolysis by (DAWSON and PLATT) 357
Paracasein:
Properties (PERTZOFF) 239
Permeability:
Membrane. IV (MICHAELIS and WEECH) 147
—, thin dry collodion (NORTHROP) 233
Peroxide:
Hydrogen, decomposition by liver catalase (WILLIAMS) 309
Phagocytosis:
Surface charge and cytoplasmic viscosity, influence on phagocytosis of a particle (PONDER) 757
Pholas:
Photosensory system, relation of time, intensity, and wavelength in (HECHT) 657
Phosphate:
Ion, and hydrolysis by pancreatic lipase (DAWSON and PLATT) 357
Photism:
Orientation by two point-sources of light (MITCHELL and CROZIER) 563

Photism—*continued*:
Phototropism, photic adaptation in, orientation in compound fields of excitation (WOLF and CROZIER) 7
Place of photic adaptation (CROZIER and WOLF) 289
Photosensory:
Latent period, influence of temperature (HECHT) 649
Pholas, relation of time, intensity, and wave-length in (HECHT) 657
Phototropism:
Dixippus morosus (YAGI) 297
Photic adaptation in, orientation in compound fields of excitation (WOLF and CROZIER) 7
Phycomyces:
Sporangiophores, growth, temperature characteristics (CASTLE) 407
Physiology:
Cell, micrurgical studies. V (REZNIKOFF) 221
—, — —. VI (POLLACK) 539
Ontogeny. A. XIII (COHN) 369
Surface tension of physiological solutions, difficulties of measurement and interpretation (JOHLIN) 301
Ultra-violet absorption spectra of certain physiological fluids (REINHARD) 1
Pigment:
Respiratory, action of potassium cyanide and ferricyanide (COOK) 339
Polarization:
Steel wire-nitric acid model of nerve activity, effect on, of (BISHOP) 159
Potassium chloride:
Acetic acid, antagonism between, in developing *Fundulus* embryos (ARMSTRONG) 515
Gelatin, combination with (NORTHROP and KUNITZ) 481
Potassium cyanide:
Respiratory pigments, action on, of (COOK) 339
Potassium ferricyanide:
Respiratory pigments, action on, of (COOK) 339
Potential:
Concentration, across skin of frog, influence of pH (AMBERSON and KLEIN) 823
Reduction, of *Amœba dubia* by micro injection of indicators (COHEN, CHAMBERS, and REZNIKOFF) 585
Prenatal:
Growth, of mouse (MACDOWELL, ALLEN, and MACDOWELL) 57
Pressure:
Vapor, of dog's blood at body temperature (GROLLMAN) 495
Protein:
Ionizable groups, nature, in (SIMMS) 629
Salts, combination with. III (NORTHROP and KUNITZ) 481
Weight, equivalent, determination (STEARN) 377
Protoplasm:
Acetate buffer mixtures effect on, as influencing rate of penetration of cresyl blue into vacuole of *Nitella* (IRWIN) 111
Acetic acid effect on, as influencing rate of penetration of cresyl blue into vacuole of *Nitella* (IRWIN) 111

Protoplasm—*continued*:
Amœba dubia, antagonism of cations in action on (REZNIKOFF) 221
Asymmetry in *Nitella*, by bioelectric measurements (OSTERHOUT and HARRIS) 391
Calcium ion in living (POLLACK) 539
Injury, positive and negative currents, relation to protoplasmic structure (OSTERHOUT and HARRIS) 673
Sodium acetate effect on, as influencing rate of penetration of cresyl blue into vacuole of *Nitella* (IRWIN) 111
Valonia, dissimilarity of inner and outer protoplasmic surfaces in (OSTERHOUT, DAMON, and JACQUES) 193

Pulsation:
Frequency in *Gonionemus*, temperature characteristics for (WOLF) 547

R

Reaction:
Enzyme and substrate (BERKSON and FLEXNER) 433
Geotropic, of rodless mice in darkness (KEELER) 361
—, — — — in light (KEELER) 361

Reduction:
Methylene blue by *Bacillus coli* (EADIE) 459
Oxidation-, intracellular. I (COHEN, CHAMBERS, and REZNIKOFF) 585
Potential, of *Amœba dubia* by micro injection of indicators (COHEN, CHAMBERS, and REZNIKOFF) 585

Rennin:
Casein, effect on, of. II (PERTZOFF) 239

Respiration:
Nerve, frog, respiratory quotient during stimulation (FENN) 175
Pigments, respiratory, action of potassium cyanide and ferricyanide (COOK) 339
Temperature characteristics for frequency of respiratory movements in young mammals (STIER and PINCUS) 349

S

Salt (s):
Proteins, combination with III (NORTHROP and KUNITZ) 481

Saponin:
Hemolysis by, reference to Ryvosh series (YEAGER) 779

Silver nitrate:
Gelatin, combination with (NORTHROP and KUNITZ) 481

Skin:
Frog, concentration potentials across, influence of pH (AMBERSON and KLEIN) 823

Sodium acetate:
Protoplasm, effect on, as influencing rate of penetration of cresyl blue into vacuole of *Nitella* (IRWIN) 111

Sodium chloride:
Acetic acid, antagonism between, in developing *Fundulus* embryos (ARMSTRONG) 515

Sodium sulfite:
Gelatin, combination with (NORTHROP and KUNITZ) 481

Sodium taurocholate:
Hemolysis by, reference to Ryvosh series (YEAGER) 779

Solution:
Physiological, surface tension, difficulties of measurement and interpretation (JOHLIN) 301

Spectrum:
Ultra-violet absorption, of certain physiological fluids (REINHARD) 1

Sporangiophores:
Phycomyces, temperature characteristics for growth (CASTLE) 407

Stimulation:
Respiratory quotient of frog nerve during (FENN) 175

Swelling:
Cell and tissue, kinetics (NORTHROP) 43

T

Temperature:
Body, vapor pressure of dog's blood (GROLLMAN) 495
Characteristic for contraction rate of whole heart (COHN) 369
— — frequency of respiratory movements in young mammals (STIER and PINCUS) 349
— — growth of sporangiophores of *Phycomyces* (CASTLE) 407
— — pulsation frequency in *Gonionemus* (WOLF) 547
Cladocerans, rate of killing at higher (BROWN and CROZIER) 25

Temperature—*continued*:
Ostrea virginica Gm., mechanical activity, effect on, of (GALTSOFF) 415
Oyster gills, mechanical activity, effect on, of (GALTSOFF) 415
Photosensory latent period, influence on, of (HECHT) 649

Tension:
Surface, of physiological solutions, difficulties of measurement and interpretation (JOHLIN) 301

Tissue:
Acid penetration into living (TAYLOR) 207
Liver, metabolism, from rats of different ages (HAWKINS) 645
Swelling, kinetics (NORTHROP) 43

Titration:
Bacteriophage, and particulate hypothesis (CLARK) 71

Tonic:
Immobility in vertebrates, mechanism (HOAGLAND) 715

U

Ultra-violet:
Absorption spectra of certain physiological fluids (REINHARD) 1

V

Vacuole:
Nitella, rate of penetration of cresyl blue into, effect of acetate buffer mixtures on protoplasm as influencing (IRWIN) 111
—, — — penetration of cresyl blue into, effect of acetic acid on protoplasm as influencing (IRWIN) 111

Vacuole—*continued*:
Nitella, rate of penetration of cresyl blue into, effect of sodium acetate on protoplasm as influencing (IRWIN) 111
Valonia:
Protoplasmic surfaces in, dissimilarity of inner and outer (OSTERHOUT, DAMON, and JACQUES) 193
Vapor:
Pressure, of dog's blood at body temperature (GROLLMAN) 495
Vertebrate:
Tonic immobility in, mechanism (HOAGLAND) 715
Viscosity:
Cytoplasmic, influence on phagocytosis of a particle (PONDER) 757
Vision:
Illumination and visual acuity, relation between (HECHT) 255

Y

Yeast:
Growth, limiting, by changing environment (RICHARDS) 525
Multiplication with constant environment (RICHARDS) 525
